

Performance through comfort

Posiflex, the technology that cares

Posiflex ergonomic seating system reduces muscular skeletal dysfunction. This unique design allows free flow that matches natural body movements.

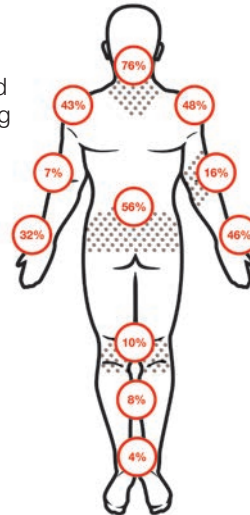

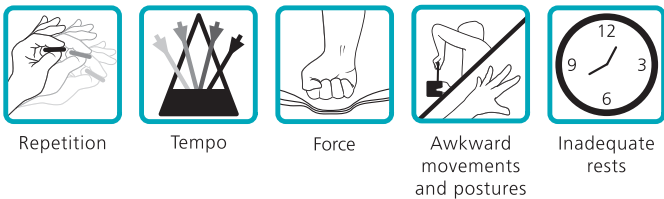

YOU CAN ADD POSIFLEX TO MOST STOOLS!

Fight muscular fatigue

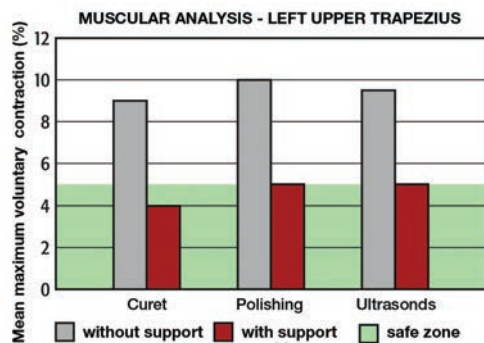

Musculoskeletal disorders are related to different stress due to fixed postures, force or repetitive movements. Injuries may be caused either by the repetition of the same movement over and over again, or the lack of movement in a static posture, causing **strain** to the **neck**, **back** and **shoulder** muscles.

Elaborate scientific study demonstrates that the use of Posiflex contributes to a more secure and comfortable work posture as muscular contractions in the arms and shoulder are diminished significantly.

◀ Percentage of dental professionals with pain in specific parts of the body over a period of 12 months.

FOR THE PAST 10 YEARS, THOUSANDS OF USERS ARE BENEFITTING FROM THE POSIFLEX ERGONOMIC SOLUTIONS

“After 4 months of using the Posiflex, the pain in my shoulders and back has been reduced by 80%.”

Michelle Fontaine, hygienist, Quebec, Canada

CLINICALLY PROVEN BY ELECTROMYOGRAPHY TO PREVENT AND REDUCE MUSCULOSKELETAL DISORDERS (MSD).

Performance through comfort

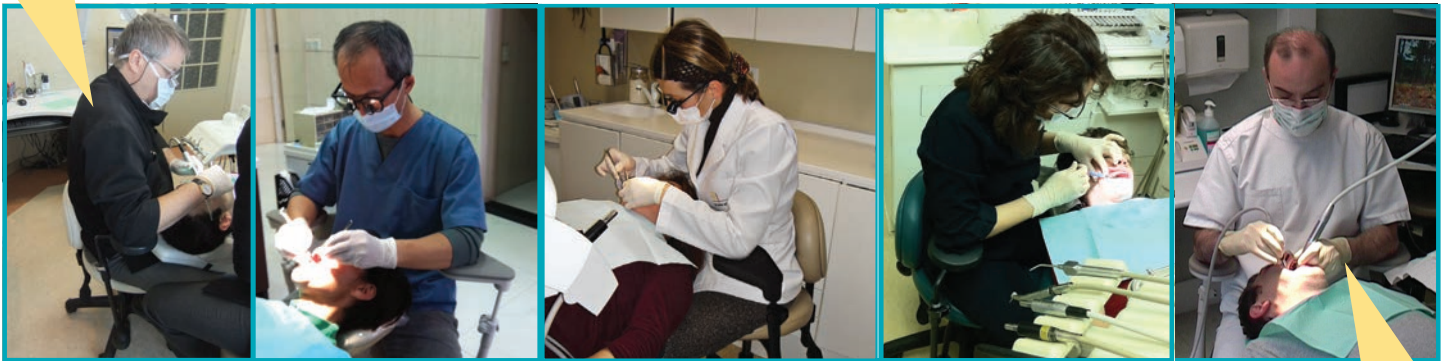

POSIFLEX, THE TECHNOLOGY THAT CARES

With the scientific studies supporting us and the many striking testimonials, the proofs are there. Posiflex will increase COMFORT, SAFETY and PRODUCTIVITY of the highly trained professionals in many fields.

“Without the Posiflex system, I am not sure if I would still be practicing dentistry today. The use of this device was instrumental in increasing my comfort level and has helped me removed cervical tension as well as in between the shoulder blades”

Dr André Gilbert, Beauport, Qc

Dr Henry Chang, Taiwan

Dr Sylvie Jetté, Qc

Dr Marcelle Thériault, Qc

“I use the elbow support 90% of the time, and I can say now that I would not work without this technology anymore because I can feel the difference. I have less tension in my shoulder at the end of the day.”

Dr Marc Apap, Saint Germain en Laye, France
